Please do not take the traffic and weather off of satellite radio. It is a convenient way to get the information, and you never have to worry about getting bad reception. The signal is always there. No static, no fade, no problem. It is my beleif the local stations are just trying to hold onto anything they can, even at the listeners expense. With the satellite radio you get the information immediatley. On standard radio you have to wait for the station to take a news and weather break.

I am a truck driver and I travel to many different areas. I don't know what radio station will give me the information I need when I need it. However I do know I can switch on my xm radio any time and get all the information I need.

PLEASE DON'T TAKE THIS VALUABLE TOOL AWAY!!!

Thank You
